TURNING DUST TO GOLD: BUILDING A FUTURE ON THE MOON AND MARS

[DOWNLOAD](#)

Springer. Paperback. Book Condition: New. Paperback. 400 pages. Dimensions: 9.4in. x 6.7in. x 0.9in. Two important factors have given rise to mankind's successful evolution into space: the first is that the possibilities are bounded only by our imaginations - if we can conceive it, historically it has been proved that we can do it, and in a predetermined timescale. The second factor is recognition of the evolving civilizations on the Moon and Mars as separate entities from Earth. Space, whether we or our children live in it or on the Moon or Mars, will be important to all of us, not only to aerospace engineers and cosmologists, because of the new opportunities for freedom and limitless growth it offers. Our continued prosperity and survival as a species will in part depend upon space exploration and the resources it provides for our industrial societies and for the markets it will create. The expansion of Earth's success in science and culture to the Moon, then Mars, and eventually the Solar System, can only strengthen mankind's core positive achievements: democracy, individual rights and equal opportunities for all. The significant topic of returning to the Moon, this time to stay, is a central part of space exploration. Concepts for lunar base structures have been proposed since long before the dawn of the space age. Suggestions made during the last 25 years are likely to form the pool from which eventual lunar base designs will evolve. Studies have intensified, both within NASA and outside national governments in industry and academe, since the days of the Apollo program, when it appeared likely that the Moon would become a second home to humans. Since then, science on the Moon, the economics of lunar development, and human physiology in space and on planetary bodies, as well as related policy...
